

Ryan Chouest PowerPoint Bullets for 6/28/10
Operational Period: 6/27/2010 Sampling Period

- Sensor readings are low and near baseline values on the region of the track outside of the potential oiling fingerprint and increase to their highest values northwest of the Deepwater Horizon incident site.
- Sea surface oil slick observations include convergence lines with dense patches of seaweed and surface sheens
- The Ryan Chouest is sailing the planned cruise track. They will not deploy any further vertical casts on cruise 5.
